TITLE	A Summary Report of the Results of an Advertisement Placed in the "Journal of Chemical Education" Offering a Free Demonstration of Computer-Based Education in Chemistry.
INSTITUTION	Texas Univ., Austin. Project C-BE.
SPONS AGENCY	National Science Foundation, Washington, D.C.
REPORT NO	EP-19-8-10-73
PUB DATE	10 Aug 73
NOTE	54p.; For related documents see IR 002 463 and 464; not available in hard copy due to marginal legibility of original document
EDRS PRICE	MF-$0.76 Plus Postage. HC Not Available from EDRS.
DESCRIPTORS	*Chemistry Instruction; College Curriculum; *Computer Assisted Instruction; *Demonstration Projects; Higher Education; *Information Dissemination; Program Evaluation; Publicize
IDENTIFIERS	*Project C BE; Project CONDUIT; Transferability

ABSTRACT

Project C-BE and CONDUIT had overlapping research objectives concerning the transferability of computer-related curriculum materials. In this regard, the projects co-sponsored an advertisement placed in the Journal of Chemical Education offering a "Free Demonstration of Computer Based Education in Chemistry." Forty packets were mailed. Of this number, 23 were direct responses to the advertisement, 9 were sent through personal or indirect contact, and 8 were sent as unsolicited information. Results of the project, including usage, reasons for not accessing the programs, user evaluation of the programs, and computer costs are discussed. (Author/EMH)

****
* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

A Project of Project C-BE under Grant GY-9340

"The Use of Computer-Based Teaching Techniques

in Undergraduate Science and Engineering

Education" and CONDUIT Project under Grant GY-31753

Supported Jointly by The University of Texas

at Austin and the National Science Foundation

ABSTRACT

Projects C-BE and CONDUIT have overlapping research objectives concerned with the transferability of computer-related curriculum materials. In this regard, the projects co-sponsored an advertisement placed in the Journal of Chemical Education offering a "Free Demonstration of Computer-Based Education in Chemistry." Forty packets of information were mailed. Of this number, 23 were in direct response to the advertisement, 9 were sent through personal or indirect contact, and 8 were sent as unsolicited information. Results of this project, including usage, reasons for not accessing the programs, user evaluation of the programs and computer costs are discussed.

Introduction

An experiment in conjunction with the research on the transferability of computer-related curriculum materials was conducted by Project C-BE (Computer-Based Education) and Project CONDUIT. (A Consortium of Regional Computer Networks at Oregon State, North Carolina, Dartmouth, Iowa, and The University of Texas at Austin concerned with the transportation and dissemination of computer-related curricular materials.)

An advertisement (see Appendix A) was placed in the December, 1972, issue of the Journal of Chemical Education in which an offer was made for a "Free Demonstration of Computer-Based Education in Chemistry." Cost of the advertisement was $215.00.

The report summarizes the results of that experiment.

Responses

Twenty-three responses were received as a direct result of the advertisement. Each respondee was mailed a prepared packet of materials containing computer access passwords, procedures for signing-on to the University of Texas TAURUS system, accessing the computer lessons, and signing-off, documentation for the eight computer-based lessons used in the experiment, and questionnaire evaluation forms. In addition, nine packets were delivered through personal or indirect contacts and 8 packets were sent as unsolicited information, bringing the total number of packets dispersed to forty. The names and addresses to whom packets were delivered are listed in Appendix B. A sample packet is available from Project C-BE (University of Texas at Austin, Austin, Texas 78712).

Of the forty packets delivered, five recipients completed and returned questionnaires, six recipients indicated by letter that they planned to access the programs in late summer, six indicated by letter that they were unable to access the materials due to limitations of their hardware facilities (generally acoustic couplers or appropriate terminals), three indicated the materials were not appropriate for their particular application, one indicated a lack of time, and one indicated a lack of funds to cover long distance telephone charges as reasons for not accessing the lessons.

Thus some form of response was obtained from a total of 22 of the 40 people receiving packets. Of this number, 15 had received packets as a direct result of the advertisement. It should be noted also that 8 of the packets that were delivered were actually unsolicited by the recipient and were sent only as a matter of information. Table I summarizes the deliveries and responses. Appendix C contains copies of the letters received explaining the reason for not accessing the lessons.

Table I

Packet Deliveries and Responses

	Packets Delivered	Questionnaire Completed	Summer Use Planned	Lack of Funds Or Hardware Or Time	Material Not Applicable	No Response
Response to Advertisement	23	1	4	7	2	9
Personal or Indirect Contact	9	4	2	1	1	1
Unsolicited	8	0	0	0	0	8
Total	40	5	6	8	3	18

Table II
Questionnaire Item Summary

I. Lessons Accessed: one (1), two (2), five (1), eight (1).

II. A. Terminal Used: Model 33 TTY (3), RCA/CRT (1), unknown (1).

B. Teaching experience: 2-5 yrs. (2), 6-10 yrs. (2), 11-15 yrs. (1)

D. 1. Content of Materials: Superior-Excellent (1), Excellent (2), Excellent-Good (1), Good (1)*, Average (0), Fair (0), Substandard (0), Completely unacceptable (0).

D. 2. Pedagogical Techniques: Excellent (2), Excellent-Good (1), Good (2), Average (0), Fair (0), Substandard (0), Completely Unacceptable (0).

D. 3. Adoption of Techniques (assuming support were available). Yes, without reservation (4), Yes, but on a trial basis (1), Undecided (0), Not at this time (0), Not ever (0).

D. 4. Following instructions within packet: Easy to follow (2), Successful, but some minor trouble due to unfamiliarity (3), Not successful because of major troubles (0), A complete failure (0).

D. 5. Rating of Curriculum Materials: C-BE is superior to institution course matter (0), C-BE is better than institution course matter (0), C-BE is equal to or the same as institution course matter (4), C-BE is below rating (0), C-BE is greatly below institution course matter (0), No response (1).

D. 6. Computer Activity on Campus: Has no computer (2), has computer (3), (Univac 1108, H-P 2000C, PDP-10,8).

D. 7. Chemistry Department Computer?: No (4), Yes (1), (IBM 7094).

D. 8. Prior experience with computers in education?: No (2), Yes (3), (BASIC-2, FORTRAN-1).

D. 9. Would you use similar programs written in BASIC?: Yes (4) Unsure (1).

D. 10. Language preference for programs?: BASIC (2), BASIC or FORTRAN (1), No Opinion (1), CLIC (1).

D. 11. How would you use the programs in class?: Homework for a grade material for no credit or voluntary basis as a supplement for credit (3), Homework credit (1), Required for credit (1).

D. 14. Interested in directions on how to prepare computer-based materials?: Yes (3), No (1) (already familiar), No response (1).

D. 15. Interested in pursuing use of chemistry computer materials in your class?: Yes (5).

*Lessons accessed were not those described in packet.

Evaluation of the Computer-Based Lessons

In general, the lessons received enthusiastic support from the five people who accessed them and completed the questionnaire. Table II summarizes the responses to the items, and Appendix D contains copies of the completed questionnaires.

It should also be noted that as a direct result of using these lessons, Dr. Bassam Shakhashiri of the University of Wisconsin at Madison plans further use of a wider selection of the University of Texas CLIC Chemistry lessons during the summer and fall of 1973. The lessons will be incorporated into chemistry classes as supplements to traditional instruction. A report of this usage will be forthcoming. Dr. William Torop, West Chester State College, West Chester, Pennsylvania, also plans to incorporate a series of Computer-Based Chemistry lessons with his classes in the fall, 1973, as a result of accessing the samples in the experiment.

Computer Costs and On-line Time

The costs and on-line time for access of the lessons by each participant are listed in Table III. An average of $1.44 for computer time and $0.55 for line time was used in interacting with the lessons. The average on-line time was 82 minutes. Considering the total computer costs and total hours of on-line time, the cost per terminal hour averages $1.44. Cost per lesson averaged $0.56. Cost of the long distance line charges is not available.

Table III

Computer Costs and On-line Time

Participant	Computer Processing Costs ($)	Computer Line Costs($)	Time On-line (minutes)	Number of Lessons	Average Cost Lesson
Hutchison	0.67	0.06	9*	2	0.37
Weill	0.88	0.29	44	2	0.58
Shakhashiri	3.55	1.62	243	8	0.65
Torop	0.52	0.29	44	1	0.81
Paukstelis	1.57	0.48	72	5	0.41

* This participant's institution is a member of the University of Texas Computation Center Southwest Regional Computer Network, and he was already familiar to a great degree with the CLIC lessons.

Professor J. J. Lagowski
Department of Chemistry
The University of Texas at Austin
Austin, Texas 78712

Dear Professor Lagowski:

My apologies for not acknowledging the programming materials which you sent me. We have been promised access (terminals) to one of the University computers for next year, but our plans as to how to utilize this are still very tentative.

My request was definetely not frivolous, but I will be unable to go over the materials that you so graciously sent until the summer.

Our computer facilities will probably be limited, and my problem, once I find out what we will be getting, is how to utilize them most efficiently.

Thank you once again.

Cordially yours,

Nathaniel L. Remes

Dr. Joe J. Lagowski
Professor of Chemistry
Department of Chemistry
University of Texas at Austin
Austin, Texas 78712

Dear Joe:

Thank you very much for your letter of April 30, indicating that we have not yet used the materials which you sent to us and which we appreciated very much. We have had a very unfortunate experience with our computer and particularly with Carl Elkins, who was our computer man. Carl has been involved in divorce proceedings and has resigned his position at the University of Mississippi School of Pharmacy Data Center. We have just recently employed another young man and I have instructed him to become familiar with the Computer Assisted Instruction program. It may be that we will have to send him down to your department for a reorientation. As soon as he is initiated into what is going on with our computer, I will get back in touch with you regarding further progress that we may be making on our Computer Assisted Instruction program here at our School. Thank you for your continued interest.

Best personal regards.

Sincerely,

Wally

Dear Sir,

Thank you for your letter of April 30, 1973 and also for the packet of computer-based materials received some time ago.

Unfortunately I have not yet had time to access and assess the system but I am hoping that within the next month I shall be able to do this and I will certainly respond to your materials as soon as possible.

Yours sincerely,

I Mary Wilkinson

Dr. J. J. Lagowski
Department of Chemistry
The University of Texas at Austin
Austin, Texas

Dear Professor Lagowski:

Please accept my apologies for not responding earlier to the materials you sent me. The problem was in no way related to the material but concerned our own facilities and my time.

Due to a change-over in our equipment, I was without a suitable terminal for a period of about four weeks just at the time your package arrived. Since that time, I have been heavily committed to organisation of the Montreal Two-Year College Chemistry Conference and this, coupled with normal end of term administration and final examinations, has prevent me from using the material.

I am still very interested in experimenting with the material and will certainly be trying it out in the next few weeks. Unfortunately, it will not be possible for me to have students use it due to the vacation. However, this would have been prohibitively expensive due to the long-distance connection in any case.

Sincerely yours,

Graeme Welch

Dear Dr. Lagowski:

Just recently, when going through a huge stack of mail which had accumulated while I was away, I found your April 30 letter concerning my having not responded to the materials sent to me earlier. My problem has been one of just not getting around to using the materials, as I have been out of town most of the time. I plan to give the system a try as soon as I get back from Europe late in July. I do hope that this long delay has not created any inconvenience, as I certainly wish to evaluate your system.

Sincerely,

Roy D. Caton, Jr.

Dear Dr. Lagowski:

In answer to your letter concerning our utilization of the packet of computer based materials that you developed, I have been unable to use them as of the moment. The university is undergoing several major administrative changes and this has affected me and my own teaching duties. As Chairman of the Department of Science Education, I have had to busy myself with other than the kind of work I would like to have been doing over the past year. It looks to me as though this might continue at least another semester or two. I do hope that I will be able to study your materials in detail and utilize them in them in the freshman chemistry course that I usually am assigned to teach.

Sincerely,

Dr. Joseph S. Schmuckler
Professor

Dear Dr. Lagowski,

In reply to your letter of 30 April concerning my lack of response to Project C-BE materials, please accept my apologies for not contacting you sooner. I have been on leave for several weeks previous to this time, and had no chance to work on this project. Since returning, however, I have been working with my associate, Mr. Marvin Parks, in an attempt to locate the necessary equipment for gaining access to TAURUS and CLIC. Thus far, we have met with frustration.

We are continuing to work on this problem intensely, believing that somewhere in this organization (Air Training Command) there is a teletype terminal with an appropriate data set. Mr. Parks was in Austin a couple of weeks ago, and conferred with Dr. Culp on procedures to gaining access to your system. If our efforts do not meet with success very soon we will call the suggested number for additional assistance.

I am most anxious to get started on this project, and am hopeful that our problems will be resolved within a few days.

Sincerely yours,

The University of Texas
Austin, Texas 78712

Dear Professor Lagowski:

Thank you for your letter of 31 January which included materials on Project C-BE. I received a project/course card with a user number for me (ZCAZ474 password: NXR).

Unfortunately, because our TTY is hardwired to the DECsystem-10 at the University of Pittsburgh, we have no acoustic coupler available. Hence, teleprocessing your material to my environment is not possible as far as I am aware. Could you forward pertinent listings and documentation in the absence of my being able to get on to your system? I am particularly interested in modules Chem. 113,115,124,60 and CCH 32.
Your consideration of my request is most appreciated. Thank you for the materials you have sent in the past and I look forward to receiving any materials you may have available in the future.

OFFICE OF THE PRINCIPAL

Dr. J. J. Lagowski
Professor of Chemistry
Department of Chemistry
The University of Texas at Austin
Austin, Texas 78712

Dear Dr. Lagowski:

I cannot offer an excuse, only my sincere apology for my tardiness in responding to the material you furnished me about Project CBE. You may recall that I requested some information about your project while you visited Midland as ACS Tour Speaker recently.

Since I teach high school chemistry, my motive in requesting this information was for my information about one of the recent trends in chemical education. Then too, many of my chemistry students attend UT and I can give them some idea of what to expect and what opportunities are available.

I fully intended to sample the programs available but was not able to secure the necessary facilities in Midland. However, on the basis of what I have read and your presentations here and at the Dallas National ACS Meeting, I have been able to acquire a good deal of information about CAI.

Therefore, I am returning the access-card and the evaluation questionairres to you. I hope you do not mind my keeping the reminder of the packet.

In my opinion the work done by you and your group is superior and a step in the right direction. I would like to see some of the results filter down to the high school level.

Thank you for your help.

Yours truly,

Dan Kallus

Dear Professor Lagowski,

My apologies for not answering sooner your letter of April 30, but the end of the academic year was rather hectic.

We did receive in early February a description of computer lessons available for free demonstration. If we did not avail ourselves of these programs, it is because the type of lessons proposed was not fitting very well the curriculum of our Metallurgy and Materials Science department. We are grateful, however, for your offering us this opportunity.

Best regards and wishes,

Sincerely yours,

Texas

Dear Professor Lagowski,

Thank you for your letter of 30th April 1973. I have received the computer-based materials which you advertised in the Journal of Chemical Education, and I thank you for sending them to me. The Centre, of which I am the Co-ordinator, does not have any teaching staff of its own, but acts to promote science education in this region. One of the ways in which it does this is by providing various services to those in higher education.

Since I was aware that there were several lecturers in chemistry in this region who are interested in computer-based education, I thought that they might be interested in seeing the materials you have produced. Consequently on receiving your materials I brought them to the attention of those who have expressed an interest, and at the moment one institution is considering making use of them. As soon as they have decided one way or another I will send you full details.

Thank you once more for meeting my request.

Yours sincerely,

D. McCormick
Co-ordinator

Professor J. J. Lagowski
Department of Chemistry
University of Texas at Austin
Austin, Texas 78712

Dear Professor Lagowski:

Forgive me for the delay in responding to your inquiry concerning our use of the C-BE materials which you recently made available to us.

In requesting information on the materials, we were hoping that they would be mostly CMI materials and that they might be transferable here to our own CDC 6500. Since this was not the case, we have not paid much attention to the materials themselves.

Your follow-up letter however, has encouraged me to forward the entire packet to the Chemistry Department to see what interest it may draw there. I therefore expect you will be hearing from them in the near future.

I appreciate your concern for us and thank you for your cordial assistance.

Best Wishes for a Pleasant Spring,

Philippe C. Duchastel

DEPARTMENT OF CHEMISTRY

May 3, 1973

Professor J.J. Lagowski
Professor of Chemistry
Department of Chemistry
The University of Texas at Austin
Austin, Texas 78712

Dear Dr. Lagowski:

Thank you for your inquiry concerning our use of your computer-based educational materials in chemistry. We were favorably impressed with the quality of the sample material included in the packet, and attempted to arrange trial use of the material in the appropriate courses. We were unable to do so mainly due to a lack of funds to support the cost of the long-distance telephone charges.

Faculty interest in CAI has continued, despite the setback. We are now seeking other methods for a trial of such material, but our first efforts will be directed toward obtaining the necessary funds.

Sincerely,

Stephen K. Knudson

Dr. J. J. Lagowski
University of Texas at Austin
Project C-BE
Department of Computer Based Science & Engineering Education
Austin, Texas 78712

Dear Dr. Lagowski,

I have tried your CBEDEM programs, especially the OCH 1 and OCH 17 programs. I was delighted with the content, pedagogery and interaction between the teletype and its operator.

It is not economically feasible for our student to use the computer in Texas because of the high cost of telephone calls. Is it possible for us to get a copy of the CBEDEM set so that we can evaluate at greater length the feasibility of this type of instructional technique in chemistry?

I am enclosing a questionnaire form related to our experience with the CBEDEM set. The only difficulty we encountered was that we were not aware that the accoustic coupler should be set to 1/2 duplex. This was not in the instructions.

I look forward to hearing from your group in the near future and I hope that you will send these programs and information about others to me as soon as possible.

Sincerely,

David R. Weill III
Chairman,
Department of Chemistry

3.	Phase Changes	Date:
4.	Heterogeneous Equilibria	Date:
5.	Organic Synthesis: Electrophilic Aromatic Substitution	Date:
6.	Elementary NMR Interpretation	Date:
(7.)	Elementary Alkene-related Synthesis	Date: 2-11-73
(8.)	Nomenclature of Alkanes	Date: 2-11-73

II. A. Circle Type Terminal Used:

(Model 33 TTY) Model 35 TTY CRT List Name _____

Other List Name _____

B. Circle Nearest description which matches your teaching experience in chemistry.

1 year or less 2-5 years (6-10 years) 11-15 years over 15 years

C. Circle descriptor which matches how you learned about the availability of this material.

(Read "Ad" in Chem. Engr. and Educ) Heard about offer from fellow instructors

Other Describe:

D. Circle the descriptor which most closely reflects your overall rating of this material:

1. Professional or Technical Content of Material(s)

(1 1) 1 1 1 1 1

Superior Excellent Good Average Fair Substandard Completely Unacceptable

Any Comments? 33 TTY IS SLOW.

2. The pedagogical techniques employed in within the chemistry modules were:

Superior	Excellent	Good	Average	Fair	Substandard	Completely Unacceptable
	(1)					

Any Comments? difficulties in "7"

3. Adoption Of Innovative Techniques:
If the judgement were left up to you for adopting or not adopting C-BE techniques to supplement formal instruction in chemistry in your college (provided money and support were available) what would your answer be?

Yes, without reservation	Yes, but on a trial basis	Undecided or don't know	Not at this time	Not Ever, (without reservation)
(1)				

Reasons: _____

4. What were your own personal experiences in following the instructions provided you in the packet?

Very easy and simple to follow. Instructions well written. Very successful	I was successful but had minor troubles because of unfamiliarity	Not successful because of major troubles	A complete failure in trying to follow the procedure
(1)			

5. Rating Of Curriculum Materials

If you compared the computer based chemistry materials with materials covering the same content taught by you at your institution, how would you rate the C-BE material?

C-BE is Superior to institution course matter	C-BE is Better than institution course matter	C-BE is Equal to or the same as institution course matter	C-BE is Below rating of inst. course matter	C-BE is Greatly below institution course matter

6. Measure of Computer Activity On Campus.
Circle appropriate reply. The (college) PDP-10 PDP-8/S
(has) hasn't a (computer) _____ (model) _____
time-sharing computer which is used for interactive or instructional
use in (list courses or subjects) MATH, PHYSICS, COMPUTER SCI

7. The Chemistry Department does, (does not) have its own instructional computer system which is a _____ model _____ computer.

8. (I have,) have not had prior experience with computers in education and have written programs in chemistry in the BASIC programming language.

9. If the programs were written in the BASIC language, would you be interested in aquiring them for use on the computer within your system? YES

10. What interactive language would you prefer to see used to write these types of programs? BASIC — FORTRAN IV

11. If these programs (and the complete package of which they are a part) were made available at your school, would you allow your students to use the programs:

1. As homework for a grade material for no credit? 2. On a voluntary basis only as a supplement for credit. 3. Not at all. (4. Other (specify).
FOR PRACTICE AND HOMEWORK CREDIT

12. If you planned to use any of this material at what level and with what texts or laboratory manuals would you use it? SAME AS SPECIFIED
GOOD GENERAL BACKGROUND

13. List the texts or manuals you would like to see computer based supplementary material developed for: SIENKO & PLANE 4th ed.
FIRST COURSE ORGANIC CHEM - LIMSTR

14. Would you be interested in directions on how to prepare computer based materials yourself? YES If so, please write or call Sam Castleberry at 512/ 471-4191.

15. Are you interested in further pursuing the use of the chemistry materials in your classes? YES if you please contact Prof. J. J. Lagowski, Dept. of Chemistry, University of Texas, Austin, Texas 78712. Telephone No. is 512/ 471-3288.
Enclosed letter
